

There's resistance to selling raw milk in Wisconsin from all kinds of areas. Like the state's Veterinary Medical Association. Keith Poulsen is with the group and outspoken about the dangers of raw milk despite proponents who say there's nothing wrong with drinking raw milk. To proponents who say there's a really small risk from drinking raw milk, Poulsen replies that it is a really small risk until someone gets sick and dies.

The full assembly is expected to soon vote on allowing raw milk sales in Wisconsin.
