

Money To Study Lead In Marsh Coming

Friday, 17 August 2012 10:23

La Crosse Gun Club trapshooting competitions at the La Crosse River marsh from 1932 to 1963 left behind lead shot, which sank into the muddy waters. A year ago, 4 professors from UW-L started looking into the lead that was left behind. The result?

Now, they have received a \$60 thousand U.S. Environmental Protection Agency grant which will help the researchers further investigate the lead in the river marsh and partner to educate the community about the marsh ecosystem.
