

The heat index could stay at 3 figures the rest of the week. Cause for concern among the areas hospitals. WIZM'S Dan Deicher has the story.

Area hospitals are prepared for people to come in or to be brought in.....all suffering from the effects of the heat. Kim Lombard of Gunderson Lutheran says there are signs you should be looking for if you have been in the heat too long.

Lombard says of course keep plenty of water around.....stay out of the sun.....keep the AC going....and check on those that may not have air conditioning.
