

A lot of changes coming in the next few years to the University of Wisconsin-La Crosse. And Chancellor Joe Gow says, with some new buildings coming, they couldn't wait any longer.

The largest project coming is replacing a 1960s-era science hall. The project, costing \$82 million, would be a new, four-story facility including teaching and research labs and associated support spaces. Gow anticipates hiring an architect in 2013 to start working on a final design. Construction for phase I would likely begin in 2015. The state-of-the-art facility replaces Cowley Hall.
